

## SecureTablePay Integration Process for New Independent Software Vendors (ISVs)

These steps apply to cases where the Processor has a certified payment solution and wants to refer new ISVs for Integration with SecureTablePay. Steps may be modified if the ISV comes direct.

### Administrative Steps

1. Processor introduces SecureTablePay technical team to the ISV's technical team

2. SecureTablePay team provides the Generic Overview Presentation to the ISV

3. Signing of the non-disclosure agreement

4. SecureTablePay team schedules a call with ISV team to answer all questions surrounding architecture and integration requirements

### Technical Steps

1. SecureTablePay team provides the ISV with the SecureTablePay Software Development Kit, Virtual Terminal, SSL Certificate and Documentation

2. ISV is provided with a terminal and test cards

3. ISV produces interface and middleware, with assistance from SecureTablePay team

4. Integration testing is performed on the Virtual Terminal and using the terminal

5. SecureTablePay team provides an end-to-end script for the ISV to complete

6. Upon successful completion of the end-to-end script, ISV receives a certification letter

7. Processor signs off on the ISV integration

**Documentation will include:**

TMC Terminal Emulator  
TGI-STP Integration Overview Document  
TGI-STP Integration Document  
TGI-STP Error Codes  
TGI-STP Client Installation Guide  
TGI-STP Client - POS Interface  
IngenicoTerminalSetupGuide

**Post Integration:**

Processor provides Terminal, TGI and Site Survey documentation to the ISV. ISV (or POS Vendor) provides POS setup documentation to Sterling.

The entire process averages 4-6 weeks.
