

Now Certified and Available in the USA

SecureTablePay

Easy. Efficient. Secure.

vantiv[®]
integrated
payments

This new partnership between SecureTablePay, a pay-at-the-table middleware, and Vantiv, the largest payment processor in the US., means you are now able to offer a cutting edge, POS agnostic and fully proven pay-at-the-table application to your customers. Restaurant guests will have a new level of security by utilizing EMV chip technology or contactless payments, along with point-to-point encryption, and the front of the house can streamline operations and efficiencies.

The Benefits of SecureTablePay

Secure

People, cards, identities, data: all are more secure with SecureTablePay. Your customers' privacy is protected: their cards never leave their hands so there is no chance of identity theft. Bringing EMV to the table protects the restaurant, reducing chargebacks and potential fraud. It's also safer for you. Since the transaction is processed between the SecureTablePay pinpad and the host processor, the sensitive and at-risk data that demands rigorous levels of PCI compliance never touches your POS.

Efficient

SecureTablePay delivers not just increased security but increased efficiency as well: the perfect combination. When you eliminate steps by completing the payment transaction directly at the table, you reduce time, cost and risk. And that means greater convenience for the customer and greater productivity for the server.

Universal

SecureTablePay works with more than 20 top restaurant management systems. (If you use a system that hasn't been integrated yet, we'll work with you to integrate it quickly and with minimal effort.) And it works with most leading payment processors, ensuring secure and accurate transaction processing.

SecureTablePay Winning Features

- Fully certified for the U.S.
- Proven in the field for more than a decade
- Works with most POS systems and leading payment processors
- EMV chip and sign as well as chip and pin
- EMV contactless / tap / NFC
- The server does not need to go to the POS station to close the check as the pinpad pulls the check information remotely from the POS
- Servers can view all open tables or a specific one
- Pinpads are not paired to a specific POS station or server
- Any server or pinpad can view and accept payments for any table
- Automatic tip calculator with percentages and/or dollar amounts
- Pinpad closes the table and completes full payment reconciliation remotely so the server does not need to dock the pinpad between transactions
- Multiple language presentation
- Accepts credit cards, debit cards, gift cards, loyalty and point cards
- Works with mobile wallets: Apple Pay and Android Pay
- Bluetooth connectivity to the terminal base
- Makes POS out of scope for PCI compliance requirements
- Multichannel ready: wireless for table service, wired for QSR and drive-thru, and 3G for delivery
